

Year 10 Product Design and Technology - Wood

This unit runs for a semester. Students explore a range of factors that affect product design and use them to prepare design options for set projects. The students learn how to work independently and safely using a range of sophisticated equipment while constructing a product to specified standards using a range of techniques. They will be introduced to the Design Process and investigate, plan, produce and evaluate projects which incorporate aspects of their own choice. This course has a major practical component supported by a theory component, and is excellent preparation for VCE Product Design and Technology.
